

Sanofi's Environmental Impact

Elizabeth DeFazio

Sanofi's Goals

Steps towards a Healthy Earth

1 | Maritime Shipping

To transport products, Sanofi has switched from air freight to maritime shipping.

The impact... CO₂ emissions cut by 60 times and transport costs reduced by 50%.

2 | LEED Certifications

To create “green” buildings, Sanofi follows the Leadership in Energy and Environmental Designs strategies to make sustainable building sights.

3 | Virtual Meetings

By having an increased number of meetings via computers (like us), there are less travel expenses and CO₂ emissions caused by travel.

CO₂ Impact

As more CO₂ enters the atmosphere, global warming will increase. Higher temperatures facilitates the spread of various diseases. Sanofi currently combats many of these diseases through the environmental awareness and treatments.

In 2001, Sanofi began Impact Malaria to fight against Malaria in 3rd world countries. They also fight against the Zika virus. Both diseases are found to spread more rapidly when higher temperatures occur.

Sanofi Takes Responsibility

Sanofi acknowledges the impact they have on the environment and actively looks for ways to improve.
